

AI TOOL REQUEST
Compliance Checklist

Per FDOT AI Policy | Topic No. 010-325-065-b | Office of Emerging Technology (OET) | Effective March 2026

► INSTRUCTIONS

Complete this checklist for all AI tools and software requests. All questions must be answered YES or NO. Attach the completed checklist to your request submission.

► **FDOT Employees:** Complete Sections A, B, D, and E. If section C (Vendor/Consultant/Contractor) does not apply — mark it "N/A" or leave it blank.

► **Vendors, Consultants & Contractors:** Complete all sections, including Section C.

SECTION A — REQUEST INFORMATION

Employee Name:	Jonathan Bailey
District / Office / Section:	District 3 / Traffic Operations /RTMC/ITS Network Maintenance
Date of Request:	3/18/2026
AI Tool / Software Requested:	Claude Standard
Vendor / Developer Name:	Anthropic
Intended Use Case / Business Purpose:	See attached Supplemental, section 3.

SECTION B — COMPLIANCE CHECKLIST (All Requestors)

Answer YES or NO for each question. Explanations are required for any "No" responses in Section F.

#	Compliance Question	YES	NO	N/A
1. HUMAN OVERSIGHT & ACCOUNTABILITY				
1	Will a human employee remain primarily responsible for the work product in which this AI tool is used?	☒	☐	☐
2	Will humans be actively engaged throughout the process, including in reviews and decisions?	☒	☐	☐
4	Will AI-generated output be reviewed and validated by a human before it is used, submitted, or distributed?	☒	☐	☐
2. TRANSPARENCY & DISCLOSURE				
5	Will you disclose when work products are partially or fully generated by an AI tool, as required by FDOT policy?	☒	☐	☐
6	Has your supervisor/approving manager been informed that AI will be used in this scope of work?	☒	☐	☐

#	Compliance Question	YES	NO	N/A
3. APPROVED ACCESS & DATA SECURITY				
7	Is the AI tool currently on the Department's approved AI tools list, or is this request seeking approval?	☒	☐	☐
8	Will this AI tool be accessed only through Department-approved systems, networks, computers, phones, or other communication devices?	☒	☐	☐
9	Will all Department data used with this AI tool remain within Department-approved and secured environments?	☒	☐	☐
4. PRIVACY & PERSONALLY IDENTIFIABLE INFORMATION (PII)				
10	Will you avoid entering PII, sensitive personal data, or protected employee/customer information into this AI tool?	☒	☐	☐
11	Will AI-generated outputs be validated to confirm they are free of personally identifiable information (PII) before use?	☒	☐	☐
5. PUBLIC RECORDS & EXEMPT INFORMATION				
12	Do you understand your obligations under Florida's public records laws as they apply to AI-generated content?	☒	☐	☐

SECTION C — VENDOR, CONSULTANT & CONTRACTOR COMPLIANCE

△ FDOT Employees: This section does not apply to you. Check the box below and proceed to Section D.

☐ **N/A — I am an FDOT employee. This section does not apply to my request.**

Complete this section only if you are a vendor, consultant, or contractor performing work under contract for FDOT.

#	Compliance Question — Vendors, Consultants & Contractors Only	YES	NO	N/A
13	Will you use only Department-approved AI tools when conducting work under contract for FDOT?	☒	☐	☐
14	Will you comply with all FDOT AI policy requirements applicable to your contract scope of work?	☒	☐	☐
15	Have you disclosed your intended AI tool usage to your FDOT project manager or contract administrator?	☒	☐	☐
16	Will you ensure that FDOT data used in AI tools is handled in accordance with your contract's data security requirements?	☒	☐	☐
17	Have you confirmed that the AI tools you intend to use do not conflict with any data sharing or confidentiality provisions in your FDOT contract?	☒	☐	☐
18	Will you notify your FDOT project manager if you change or add any AI tools during the course of your contract?	☒	☐	☐

SECTION D — EXPLANATIONS FOR ANY "NO" RESPONSES

Reference the question number and provide an explanation. A "No" response may result in request denial or escalation for review.

Question #(s): _____ Explanation:

SECTION E — CERTIFICATION & SIGNATURES

By signing below, I certify that all information provided in this checklist is accurate and complete, that I have read and understand FDOT Artificial Intelligence Policy No. 010-325-065-b (Effective September 9, 2025), and that I agree to use the requested AI tool in full compliance with all applicable FDOT policies, Florida law, and federal regulations.

Supervisor / Approver Signature: _____ Date: _____

Florida Department of Transportation
Office of Transportation Technology — District 3 ITS Network Management

Information Resource Request (IRR)

Claude Code — AI-Assisted Development Tool

Date:	March 4, 2026
Requesting Office:	Transportation Technology
Document Version:	1.0
Classification:	Internal Use
Policy Reference:	Topic No. 010-325-065-b

1. Executive Summary

The Office of Transportation Technology requests approval to procure Claude Code, an AI-assisted development tool created by Anthropic, for use by a small team of 2–10 developers and analysts. Claude Code is a command-line and web-based agentic coding assistant that accelerates software development, data analysis, scripting, and technical documentation tasks. The team is actively building Model Context Protocol (MCP) servers that integrate Claude AI agents with FDOT operational systems including SunGuide, MIMS, DIVAS, Ruckus, and FL511 for District 3 ITS Network Management.

This request has been prepared in compliance with the Department's Artificial Intelligence (AI) Policy (Topic No. 010-325-065-b, effective September 9, 2025). The tool will be used exclusively on local codebases and non-sensitive, non-exempt data. All output will be reviewed and validated by human staff before use in any Department deliverable.

Claude Code directly supports multiple active and planned Transportation Technology projects by reducing development cycle time, improving code quality, and enabling staff to focus on higher-value engineering and analysis work.

2. Product Description

2.1 What Is Claude Code?

Claude Code is an AI-powered development assistant built by Anthropic. It operates as both a command-line interface (CLI) tool and a web-based application, enabling developers to write, review, debug, test, and refactor code through natural language interaction with an AI agent. It can read entire codebases, execute commands, run tests, and integrate with version control systems like GitHub.

2.2 Core Capabilities

- Code generation, editing, and refactoring across multiple programming languages
- Automated code review, bug detection, and security vulnerability scanning
- Data analysis and scripting for processing datasets and automating workflows
- Technical documentation generation and maintenance
- Test creation and execution with integrated feedback loops
- Codebase comprehension is the ability to read and understand large, existing codebases.
- Plugin and skills system for customizing agent behavior to organizational workflows

2.3 Vendor Information

Vendor	Anthropic, PBC
Product	Claude Code (included with Claude Pro, Max, or Team plans)
Website	https://claude.com
SOC 2 Type II	Completed — independently audited
Data Encryption	TLS 1.2+ in transit; AES-256 at rest
Zero Data Retention	Available via enterprise addendum

3. Business Justification

3.1 Problem Statement

The Office of Transportation Technology maintains and develops software applications, data pipelines, and analytical tools that support the Department’s mission. The team is currently building a suite of MCP (Model Context Protocol) servers that connect AI agents to FDOT’s operational systems— SunGuide for traffic management, MIMS for maintenance ticketing, DIVAS for video, Ruckus for network management, and FL511 for traveler information. Each MCP requires rigorous tool definitions, input validation, safety controls, error handling, testing, and documentation. Current development processes involve significant manual effort, and as the number of MCP integrations grows, the team needs tools that amplify developer productivity without compromising quality or security.

3.2 Proposed Solution

Claude Code will serve as an AI-assisted development companion for the team, supplementing — not replacing — human developers. It will be used to accelerate routine coding tasks, improve code quality through AI-powered review, automate repetitive scripting, and assist with technical documentation. All AI-generated output will be validated by human staff in accordance with Department policy.

3.3 Supporting Projects

Claude Code will directly support the following active and planned initiatives within District 3 ITS Network Management and Transportation Technology:

Project / System	Description	Claude Code Application
MCP Server Development	Building Model Context Protocol (MCP) servers that connect Claude AI agents to FDOT operational systems (SunGuide, MIMS, DIVAS, Ruckus, FL511)	Code generation, testing, and documentation for MCP tool definitions, input validation, error handling, and API integrations
SunGuide Integration	Real-time traffic management system integration for incident detection, camera control, and DMS activation via AI-orchestrated workflows	Developing and refining MCP tools, writing unit and integration tests, and generating operator documentation
MIMS Ticket Automation	AI-assisted maintenance ticket creation and management linked to SunGuide incident data with deduplication logic	Code review and debugging of ticket creation logic, deduplication algorithms, and incident correlation mapping
Stream Deck Operator Workflows	Multi-MCP workflow orchestration via Elgato Stream Deck for TMC operators, including approval gates for public-facing actions	Building chained workflow scripts, UI feedback logic, and testing multi-system integration sequences
ITS Network Monitoring	Ruckus network management and device health monitoring for ITS field equipment across District 3 corridors.	Scripting network health queries, automated alerting logic, and performance metric dashboards.

3.4 Expected Benefits

- Reduced development cycle time — estimated 30–50% faster completion of routine coding tasks.
- Improved code quality through automated review and bug detection before human review.
- Faster onboarding of new team members through codebase comprehension capabilities.
- Automated generation and maintenance of technical documentation.
- Increased staff capacity to focus on architecture, design, and stakeholder engagement.

4. Cost Estimate

Pricing is based on Anthropic’s published plans as of March 2026. The recommended option for a small team is the Team plan with Premium Seats, which includes Claude Code access and collaboration features.

Plan Option	Per Seat/Mo	Seats	Monthly	Annual
Pro (Individual)	\$20	[TBD]	[TBD]	[TBD]
Team — Premium Seat	\$150	[TBD]	[TBD]	[TBD]
Enterprise (Custom)	Custom	[TBD]	[TBD]	[TBD]

Note: Team plans require a minimum of five members. Enterprise pricing includes SSO, audit logging, enhanced context windows, compliance APIs, and optional Zero Data Retention. Contact Anthropic for a custom quote.

5. Compliance with FDOT AI Policy

This section demonstrates how the proposed use of Claude Code satisfies each requirement of the Department's AI Policy (Topic No. 010-325-065-b, effective September 9, 2025).

5.1 AI Must Supplement Human Work

Claude Code will function exclusively as a development assistant. All code, analysis, and documentation produced by the tool will be initiated, directed, and reviewed by human developers. The tool does not operate autonomously or make decisions on behalf of the Department. Developers will use Claude Code to draft, review, and refine work that they are primarily responsible for producing.

5.2 Human Involvement in Reviews and Decisions

The team will implement the following human-in-the-loop controls:

- All AI-generated code will be reviewed through the team's existing code review process (pull requests, peer review) before merging into any repository.
- AI-generated documentation will be reviewed and approved by a subject matter expert before publication.
- AI-suggested fixes and refactors will be evaluated by the developer and tested before acceptance.
- No AI output will be deployed to production without human review and sign-off.

5.3 Ethical Use and Legal Compliance

Anthropic's Claude models are designed with built-in safety guardrails that prevent generation of harmful, biased, or unethical content. The tool will be used in compliance with all applicable federal and state laws, rules, regulations, and Department policies. Usage will be limited to software development, data analysis, and documentation tasks that fall within the scope of the team's existing responsibilities.

5.4 Transparency and Disclosure

The team will maintain transparency by disclosing the use of AI assistance in development artifacts where appropriate. This includes noting AI involvement in code commit messages, documentation metadata, and project records. Any deliverables produced with AI assistance will be labeled accordingly.

5.5 Privacy and Data Protection

Claude Code will be used exclusively on local codebases and non-sensitive data. The following safeguards will be in place:

- No personally identifiable information (PII) will be input into the tool.
- No data exempt from public disclosure under Florida's public records laws will be processed by the tool.
- No Department credentials, passwords, or access tokens will be shared with the tool.
- Anthropic provides TLS 1.2+ encryption in transit and AES-256 encryption at rest.

- An optional Zero Data Retention (ZDR) addendum is available for enterprise customers, ensuring no prompts, outputs, or metadata are persisted on Anthropic's systems.
- Anthropic has completed an independent SOC 2 Type II audit.

5.6 Output Validation

All AI-generated output will be validated by human staff to ensure it is free of PII, does not infringe on copyright, and meets Department quality standards. The existing code review and QA processes will serve as the validation mechanism. No AI output will be published or deployed without human verification.

5.7 Prohibited Access

Claude Code is not a prohibited AI application. It is a commercial product from a reputable vendor (Anthropic) with enterprise-grade security controls. Users will access Claude Code only through authorized channels (approved subscriptions) and will not attempt to circumvent any Department IT security controls.

6. Policy Compliance Summary

The following table maps each FDOT AI Policy requirement to the specific controls and practices that will be implemented.

Policy Requirement	How Claude Code Complies	Control Mechanism
AI supplements human work	Tool assists developers; does not operate autonomously	Developer initiates and directs all tasks
Human involvement in reviews	All output goes through code review and QA	Pull request process; peer review
Ethical and legal compliance	Built-in safety guardrails; limited to authorized tasks	Usage policy; team training
Transparency and disclosure	AI use disclosed in commits and documentation	Commit message conventions; metadata labels
Privacy and data protection	No PII or exempt data processed	Data handling guidelines; team training
Output validation	Human review of all AI output	Code review; QA testing; SME sign-off
No prohibited access	Commercial tool accessed via authorized subscription	IT procurement; account management

7. Security Assessment

7.1 Data Classification

Data types to be processed	Source code, scripts, configuration files, technical documentation, non-sensitive datasets
Data explicitly excluded	PII, data exempt from public disclosure, credentials, passwords, financial records, HIPAA-protected data
Network requirements	Internet access to Anthropic’s API (api.anthropic.com and claude.ai); no access to internal FDOT systems required

7.2 Vendor Security Controls

- SOC 2 Type II certified — independently audited security, availability, and confidentiality controls
- TLS 1.2+ encryption for all data in transit
- AES-256 encryption for all data at rest
- SAML 2.0 and OIDC-based SSO support (Enterprise tier)
- Optional Zero Data Retention addendum — no prompts, outputs, or metadata persisted
- Compliance API for real-time programmatic access to usage data (Enterprise tier)
- Audit logging for compliance and governance purposes
- Isolated virtual machines for web-based Claude Code sessions with automatic cleanup

8. Implementation Plan

Phase	Activity	Timeline	Owner
1	Procurement and account setup	[TBD]	[TBD]
2	Develop usage guidelines and data handling procedures	[TBD]	[TBD]
3	Train initial team on tool usage and AI policy compliance	[TBD]	[TBD]
4	Pilot deployment on 1–2 active projects	[TBD]	[TBD]
5	Evaluate pilot results and gather feedback	[TBD]	[TBD]
6	Full team rollout (if pilot is successful)	[TBD]	[TBD]
7	Ongoing monitoring, compliance reviews, and reporting	Ongoing	[TBD]

9. Risk Assessment and Mitigation

Risk	Likelihood	Mitigation	Residual Risk
Sensitive data inadvertently sent to AI	Low	Data handling policy; no PII/exempt data; team training; pre-submission review	Low
AI-generated code contains bugs or vulnerabilities	Medium	Mandatory code review; automated testing; Claude Code Security scanning	Low
Over-reliance on AI output	Low	Human-in-the-loop requirement; policy training; regular compliance checks	Low
Copyright infringement in AI output	Low	Human validation of all output; Anthropic's built-in content protections	Low
Vendor data breach	Low	SOC 2 Type II certification; encryption at rest and in transit; optional ZDR	Low
Service disruption	Low	Tool supplements existing workflow; no critical dependency; fallback to manual process	Very Low
